

## Software-Based Energy Management Tools

These software-based energy management tools allow network administrators to remotely manage Windows-based PCs in sophisticated IT environments that dynamically control many computers from one central location. This includes setting power management features and turning off computers and monitors when they're not needed.

Examples of PC network energy management software include, but are not limited to\*:

- Absolute Manage
- Adapiva Companion
- Avocent LANDesk® Power Manager
- BigFix, Inc.
- Desktop Authority® from ScriptLogic
- Energy Saver Pro from EDU Business Solutions
- Intel® vPro™ Technology
- Kaseya Desktop Policy Management
- Lightspeed Systems
- Microsoft System Center Configuration Manager 2007 R3
- NightWatchman® from 1E
- Power Save from Faronics
- SURVEYOR by Verdiem®
- Symantec Altiris with eiPower Saver plug-in (plug-in required to qualify)
- SyAM System Area Manager

### **It's time to refresh your views on energy savings!**

You'll minimize monitor and peripheral run times and maximize energy savings without interfering with end-user productivity or desktop maintenance. These programs are easy to implement, require minimal maintenance, and can deliver a return on investment in 18 months or less.

\* Other software not listed and incentives over \$25,000 require pre-approval. Installation cost does not include ongoing annual software license or other fees.
