

# Full Service Wind System Installation Firms Active in Wisconsin

This alphabetical listing of wind system installers and general contractors will help you quickly find a company that can install a wind system at your home, farm, or business, up to 100kW in size. Except as noted, all firms listed install new and remanufactured or used turbines, provide maintenance for all turbines, and install grid connected and off-grid systems. Each listing includes information about the installer, including contact information. Appearing on this list does not imply recommendation or endorsement by Focus on Energy.

Companies fall into one of the following two categories:

- Full service installers who are prepared to design, sell, install, service or repair wind systems.
- General contractors who offer a palette of services, but work with sub-contractors to install or service wind systems.

## When Selecting an Installer

Focus on Energy recommends that you interview potential contractors. Questions that you may ask include:

- Can you provide references from previous customers with similar systems?
- When would you be able to perform the work?
- How long will the project take?
- Do you provide a performance guarantee and/or warranty, and if so, what are the details?
- How many similar systems have you installed?
- Have you worked with local building officials and utility representatives when installing similar systems in the past?
- Do you have a master electrician (or professional electrical engineer) as part of the project team?
- Will you hire subcontractors to complete portions of the project? What firms will you hire and what will they do?
- Do you repair systems that you installed, and if so, what are your rates?
- What kinds of training will you provide me with so that I can better operate and maintain my system?

Focus on Energy works with eligible Wisconsin residents and businesses to install cost effective energy efficiency and renewable energy projects. Focus information, resources and financial incentives help to implement projects that otherwise would not get completed, or to complete projects sooner than scheduled. Its efforts help Wisconsin residents and businesses manage rising energy costs, promote in-state economic development, protect our environment and control the state's growing demand for electricity and natural gas.
